

## Navigation and orientation report

The topic of my website is "Online Personal Profile". I am going to introduce the structure of my website. According to UX BOOTH website (2009), the users are the same. They might be search navigators or link-answering machines, but they all have extra mental systems that let them know where they are on the site map.

In the top of my home page is the sitemap. It is showing the structure of my website. For example, there are "HOME", "ABOUT ME", "ACADEMIC HISTORY", "PREVIOUS WORK EXPERIENCE", "WORK SAMPLE 1", "WORK EXAMPLE 2", "NAVIGATION AND ORIENTATION REPORT", "DESIGN RATIONALE REPORT" and "CONTACT ME". I think my site map is very brief and it provides their links to connect the relevant page. The reason why I choose this order is I need to show my personal information in advance and let the audience know my background. Then, they are easier to look through my more detail, such as in my third, fourth, fifth and sixth pages, there are my experience and my work samples. Moreover, there are a large number of links in my pages. For example, in my sixth page, it is work sample 2. In this page, under the image is the description of my sample and the link to my sample of document. On the other hand, about the orientation element, there are home page and site map in my website. In my home page, the upper left

corner is my name. And next to my name is the site map. Moreover, the center of my home page is my title. It is effectively to show my structure of my website.
